

Special Issue

Oxidative Stress, Endoplasmic Reticulum and Mitochondrial Stress and Senescence

Message from the Guest Editors

Aging leads to increased exposure to oxidative stress. Aging mitochondria and ER are more susceptible to oxidative stress but also generate more pro-oxidants. Oxidative DNA damage may induce senescence. Taken together, oxidative stress and senescence are intricately connected. Oxidative stress induces aging/senescence, and aging induces oxidative stress. Since mitochondria and ER are both important sources and targets of intracellular oxidative stress, the key to understanding the interaction between oxidative stress and aging/senescence is in understanding the role of ER and mitochondria in aging/senescence. In this Special Issue of *Antioxidants*, we invite you to present your latest research or a review on this topic. We welcome submissions on any topic at the intersection of oxidative stress, aging/senescence, and ER/mitochondrial stress. In addition, we also welcome contributions addressing the prevention of and intervention in the detrimental effects of oxidative stress and aging/senescence on organellar function. We look forward to your contribution and are open to discussing your suggestions.

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.

Via Cintia 4, I-80126 Naples, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, PubAg, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Chemistry, Medicinal) / CiteScore - Q1 (Food Science)
