

Special Issue

Vitamin C, Antioxidants and Disease

Message from the Guest Editor

Antioxidants, including vitamin C, are known to control the occurrence of diseases with enhanced immune function and direct anti-virus, anti-cancer, and anti-inflammatory effects. For this reason, the utilization of vitamin C and antioxidants as good adjuvants that can enhance the efficacy of conventional treatments used to treat diseases and reduce side effects is increasing. In this respect, this Special Issue will introduce research regarding the effect of antioxidants, including vitamin C, on the regulation of the development of various diseases, such as cancer, inflammatory diseases, and infectious diseases, especially COVID-19. Furthermore, effective methods for the prevention and treatment of diseases by antioxidants and vitamin C based on these findings will be introduced.

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.
