Transition-Metal Contrast Agents for MRI

Message from the Guest Editors

By far, the majority of MRI contrast agents are coordination complexes of Gd(III), which exhibit high magnetic susceptibility and impart contrast by enhancing the relaxation rate of surrounding water protons. However, growing safety concerns over the use of lanthanide-based contrast agents have led the drive to find alternatives to gadolinium-based MRI agents.

One approach is to look to endogenous transition metal ions as alternatives. Several strategies can be used to achieve contrast in proton MRI using transition metal ions, including conventional relaxivity agents, which exploit paramagnetic relaxation enhancement, and paraSHIFT agents, for which paramagnetic hyperfine shifts are induced by anisotropic magnetic susceptibility. Spin changes can be induced with an external stimulus using transition metal chemistry in the pursuit of switchable contrast agents for imaging biochemical processes. This Special Issue aims to publish a collection of research contributions of recent work in the development, study, and understanding of transition metal contrast agents for MRI.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
