Fractional-Order Equations and Optimization Models in Engineering

Message from the Guest Editors

Fractional-order equations and optimization models have become two effective tools for modeling in engineering and scientific research in recent years. On one hand, optimization algorithms are often used in many numerical solutions of fractional-order equations; on the other hand, the constraints of many optimization problems in practice are fractional ordinary differential or partial differential equations. Therefore, fractional-order equations and optimization theories tend to merge with each other. Different types of fractional-order equations and optimization models are studied from the perspective of analysis and numerical value, and some specific applications in science and technology have been put forward. This Special Issue aims to bring together research on “Fractional-Order Equations and Optimization Models” using different models and methodologies. We firmly believe that this Special Issue will provide an opportunity to encourage intersection and strengthen this hot research area.

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Humberto Bustince

Department of Statistics, Computer Science and Mathematics, Public University of Navarra, 31006 Pamplona, Spain

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.
