

Special Issue

p -adic Analysis and q -Calculus with Their Applications

Message from the Guest Editors

This Special Issue focuses on the applications of the p -adic analysis and q -calculus to various fields of number theory that deal mainly with mathematical analysis of functions of p -adic numbers in mathematics and the theory of p -adic strings and quantum mechanics, and the theory of complex disordered systems-spin glasses in physics. Potential topics include but are not limited to the following:

- q -umbral analysis
- q -Sheffer polynomials
- q -difference equations
- q -calculus in operator theory
- p -adic zeta functions
- p -adic q -integrals with applications
- p -adic mathematical physics

Guest Editors

Dr. Serkan Araci

Prof. Dr. Martin Bohner

Dr. Roberto B. Corcino

Dr. Sunil Dutt Purohit

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Humberto Bustince

Department of Statistics, Computer Science and Mathematics, Public University of Navarra, 31006 Pamplona, Spain

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.
