Special Issue

The Breakthrough of Traditional Electrochemical Energy Storage Systems

Message from the Guest Editors

Novel-concept battery systems, such as dual-ion batteries, halogen batteries, ammonium-ion batteries, decoupled design batteries and others, have emerged in the past few years in an attempt to overcome the shortcomings of traditional battery systems or to achieve superior performance over them. In this Special Issue, entitled "Breakthroughs in Traditional Electrochemical Energy Storage Systems", various types of novel battery systems, their development history, reaction mechanism, and the electrodes and electrolytes involved will be summarized, aiming to a provide reference for new researchers entering this field. Moreover, the relevant optimization strategies, including the modification of electrodes, electrolytes and the configuration design, will be reported. Furthermore, the research challenges and possible development directions of novel-concept battery systems will be defined. This Special Issue provides an opportunity for researchers in the field to exchange ideas, to solve problems collaboratively, stimulate ideas and strengthen cooperation. Our aim is to contribute to the further development of novel-concept batteries.

About the Journal

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Editor-in-Chief

Prof. Dr. Karim Zaghib
Department of Chemical and Materials Engineering, Concordia University, Montréal, QC H3G 1M8, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Electrochemistry) / CiteScore - Q2 (Electrical and Electronic Engineering)
