

Special Issue

Process Intensification on Beverages Production

Message from the Guest Editors

Process intensification is a recent field with growing interest with a focus on the reduction in equipment size and cleaner and more energy-efficient technology. These can result in significant improvements in terms of process and efficiency, superior quality of products, a decrease in capital and operating expenses, less waste, and improved process safety. The beverage industry shows a panoply of opportunities for improving process and create new value. This Special Issue on “Process Intensification on beverages production” intends to illustrate novel trends in beverage research and industry, and demonstrate that with the proper methodology or equipment it is possible to integrate multiple processing steps into a single unit operation or optimize critical parameters.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Edgar Chambers IV
Center for Sensory Analysis and Consumer Behavior, Kansas State
University, Manhattan, KS 66506, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), FSTA,
CAPlus / SciFinder, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Food Science and Technology) / CiteScore - Q1
(Food Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 20.6 days after
submission; acceptance to publication is undertaken in 3.9
days (median values for papers published in this journal in
the first half of 2024).
