Feature Papers in Antibacterial Nanomaterials and Biomaterials

Message from the Guest Editor

Bacterial infections constitute a great threat to human health. For many years, antibiotic therapy has played essential roles in the antibacterial treatment. However, the irrational use of antibiotics has led to the emergence of drug-resistant pathogens, which substantially compromises the efficacy of antibiotic therapy. Since the synthesis or discovery of new antibiotics is quite challenging and time-consuming, developing novel antibacterial approaches is of great importance and significance. Previous decades have witnessed the rapid development of various materials for biomedical use. Many functional nanomaterials and biomaterials for antibacterial use have been reported. Some serve as advanced carriers for delivery of antibiotics and/or other antibacterial agents, including hydrogels, polymeric nanoparticles and liposomes. Some others, such as metal (oxide) nanoparticles, MXene nanosheets and graphene-based nanomaterials, act as antibacterial agents directly due to their intrinsic or stimuli-induced antibacterial activity. Particularly, these materials do not induce bacterial resistance.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Anthony Guiseppi-Elie

Department of Biomedical Engineering, Texas A&M University, College Station, TX 77843, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Biomedical) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
