Molecular and Neurological Aspects of Sensory Processing Disorders

Message from the Guest Editors

The physiological sensory information process is critical during development because from birth we are surrounded by stimuli that we have to encode, such as smell, taste, and touch. Sensory processing disorders (SPDs) affect the ability to detect and respond to sensory stimuli, impairing different sensory systems, e.g., auditory, taste, touch, and vestibular systems. Studies have demonstrated a possible genetic component and that SPDs seem to be linked to neurodevelopmental disorders. SPDs still remain not fully understood, which means that new scientific approaches and technological advances must continue to be combined in order to completely understand SPDs. Moreover, it could be useful to use innovative diagnostic and treatment tools for early diagnosis and a more efficacious treatment. The main aim of this research topic is to reach the state of the art about SPDs from the molecular and neurological point of view. Another aim is to provide a new starting point for new research in order to highlight and more deeply understand the pathological mechanisms to enable early diagnosis and a more efficacious treatment.

About the Journal

Message from the Editorial Board

A major strength of biological science is the diversity of approaches that biological scientists apply to their research problems. *Biology* reflects this diversity and brings together studies employing the varied experimental and theoretical approaches that are fueling biological discovery. *Biology*, the journal, is a fully peer-reviewed publication with a rapid and economical route to open access publication and is listed on PubMed. All articles are peer-reviewed and the editorial focus is on determining that the work is scientifically sound rather than trying to predict its future impact.

Editors-in-Chief

Prof. Dr. Jukka Finne

Research Programme in Molecular and Integrative Biosciences, Faculty of Biological and Environmental Sciences, University of Helsinki, P.O. Box 56, FI-00014 Helsinki, Finland

Prof. Dr. Andrés Moya

Integrative Systems Biology Institute, University of Valencia and CSIC, 46980 Valencia, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (General Agricultural and Biological Sciences)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
