Cellular and Metabolic Reprogramming in Cancer

Message from the Guest Editors

Cancer is a heterogeneous disease caused by genetic and epigenetic changes conferring characteristic properties to cancer cells. Cancer cells have the capability to modify and reprogram their cellular metabolism in order to support biomass production and proliferation. Cellular and metabolic reprogramming can occur in response to both intracellular and extracellular signals, including growth factors and cytokines, ECM remodelling and chronic inflammation. Cellular and metabolic reprogramming contributes to acquired drug resistance to anti-cancer agents, significantly limiting patient survival. The purpose of this Special Issue is to focus on cutting edge research and cover advances on cellular and metabolic reprogramming in malignancies, including cancer stem cells and differentiation, extracellular matrix remodeling, metabolic switches, and anticancer strategies, their therapeutic potential, benefits, possible complications, and pitfalls of such approaches. We invite authors to submit original and novel review articles on basic and translational research.

- cancer
- stem cells
- differentiation
- cellular reprogramming
- metabolic reprogramming/adaptation

About the Journal

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Editor-in-Chief

Prof. Dr. Felipe Fregni

1. Neuromodulation Center and Center for Clinical Research Learning, Spaulding Rehabilitation Hospital and Massachusetts General Hospital, Harvard Medical School, Boston, MA 02114, USA

2. Department of Epidemiology, Harvard T.H. Chan School of Public Health, Boston, MA 02115, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q2 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the first half of 2024).
