Liver Fibrosis: Molecular Mechanisms, Potential Therapeutic Targets and Clinical Biomarkers, 2nd Edition

Message from the Guest Editor

Liver fibrosis is an important pathological condition that directly affects the prognosis of chronic liver diseases, including viral hepatitis and metabolic dysfunction-associated steatotic liver disease (MASLD). The mechanism of fibrosis formation has long been investigated. Recently, therapies targeting hepatic stellate cells (HSC) activation, fibrosis scar evolution, immunity, and cell death have been proposed. On the other hand, the development of non-invasive fibrosis biomarkers that do not require liver biopsy is underway. Serum markers such as FIB-4 and APRI, as well as US and MRI elastography, are gaining recognition. In this Special Issue, we focus on the study of cellular signals and receptors that are altered in liver fibrosis formation. Comprehensive studies summarizing potential therapeutic targets, reports of novel therapeutic targets, and discussions of the development of fibrosis biomarkers that could serve as indicators of fibrosis treatment are welcome.

About the Journal

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Editor-in-Chief

Prof. Dr. Felipe Fregni

1. Neuromodulation Center and Center for Clinical Research Learning, Spaulding Rehabilitation Hospital and Massachusetts General Hospital, Harvard Medical School, Boston, MA 02114, USA

2. Department of Epidemiology, Harvard T.H. Chan School of Public Health, Boston, MA 02115, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q2 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the first half of 2024).
