Recent Advances in Understanding of the Role of Synuclein Family Members in Health and Disease: Third Edition

Message from the Guest Editor

Extensive studies of \(\mathbb{\pi}\)-synuclein function and dysfunction revealed its involvement in multiple normal and aberrant molecular processes and, consequently, various effects on the nervous system cell biology. However, certain other types of cells normally express this protein, and they may also be affected by \(\mathbb{L}-\) synuclein dysfunction and thus contribute to pathological changes in \(\mathbb{Z}\)-synucleinopathies. It would be beneficial to summarize scattered data on these aspects of \(\mathbb{N}\)-synuclein biology and pathology. Recent studies have drawn attention to the other two members of the family, b-synuclein and g-synuclein, whose role in homeostasis and pathology is still poorly understood. Three members of this family share many structural properties and have an overlapping pattern of expression and intracellular distribution in the developing and adult nervous systems, which points to functional redundancy within the family. However, each synuclein has its own functions unshared with two other synucleins, and in some cellular mechanisms and pathways, these functions could be antagonistic rather than synergistic.

About the Journal

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access iournal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to Biomedicines, be it original research, review articles, or developing Special Issues of current key topics.

Editor-in-Chief

Prof. Dr. Felipe Fregni

- Neuromodulation Center and Center for Clinical Research Learning, Spaulding Rehabilitation Hospital and Massachusetts General Hospital, Harvard Medical School, Boston, MA 02114, USA
- 2. Department of Epidemiology, Harvard T.H. Chan School of Public Health. Boston. MA 02115. USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q2 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the first half of 2024).
