Key Advances in Brain Stimulation

Message from the Guest Editors

Brain stimulation is one of the most rapidly expanding fields of research in contemporary neuroscience. This Special Issue covers all topics related to experimental findings aiming to better understand the mechanisms of action of the different neuromodulatory techniques, either invasive (e.g., deep brain or epidural stimulation) or non-invasive, such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), transcranial random noise stimulation (tRNS), and focused ultrasound stimulation.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.
