Conformational Transitions in Polypeptides and Nucleic Acids

Message from the Guest Editor

Proteins and nucleic acids are naturally optimized to undergo changes to their conformations in a narrow range of conditions around what is considered normal. Understanding conformational transitions in polypeptides and nucleic acids helps us to know more about mechanisms involved in the structure of related biological macromolecules. After the measurement is taken, the next step is to decide which model to apply in order to process the obtained experimental data. Analytical theories and computer simulations are often applied in such research. This Special Issue aims to report recent studies on conformational transitions in polypeptides and nucleic acids. Both original research articles and comprehensive reviews are warmly welcomed.

About the Journal

Message from the Editorial Board

Editors-in-Chief

Prof. Dr. Victor Muñoz

Director NSF-CREST Center for Cellular and Biomolecular Machines (CCBM), University of California Merced, 5200 North Lake Road, Merced, CA 95340, USA

Prof. Matthias Buck

Department of Physiology and Biophysics, School of Medicine, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, OH 44106, USA

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2024).

Recognition of reviewers

: APC discount vouchers, optional signed peer review and reviewer names are published annually in the journal.
