# Liquid Biopsy Applications and Challenges

### Message from the Guest Editor

Liquid biopsy is not literally a biopsy, but is a new diagnostic concept applied to optimize the management and follow up for cancer patients by using circulating tumor cells (CTC), cell free DNA (cfDNA), cell free RNA (cfRNA) and micro-RAN (miRNA) that are released from primary tumor or metastatic deposits into the peripheral blood or body fluids. Liquid biopsy is not an invasive procedure, and it aims to detect target molecules, monitor therapeutic response and resistance, avoid repeat tissue biopsies where the tissue is not available and predict prognosis. Hence, liquid biopsy has become the leading molecular technique for precision medicine. In fact, the applications of liquid biopsy go beyond the field of oncology, such as in the fields of obstetrics, cardiology and pediatrics.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Massimo Negrini  
Department of Morphology, Surgery and Experimental Medicine,  
University of Ferrara, Ferrara, Italy

---

#### Author Benefits

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed, PMC, Inspec, CAPlus / SciFinder, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).

##### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
