

Special Issue

Analysis of Sequence Data from Bacterial and Human Epigenomes

Message from the Guest Editors

This Special Issue will focus on analyzing sequence data from bacterial and human epigenomes. The scope of this Special Issue includes novel biological techniques, sequencing data, epigenomic information, and analysis tools. It also includes the analysis of bacterial data in the context of infectious diseases and human data in the context of clinical cases. We invite the research community from both academia and industry to submit their work on bacterial and human epigenomes for this Special Issue. Even though the focus of the Issue is analyzing sequence-level data, we encourage colleagues to submit relevant research work that was performed using methods and technologies apart from sequencing. This Special Issue will provide a snapshot of current methods and analyses that are being used by the scientific community for understanding bacterial and human epigenomes. We anticipate that these research findings will reveal further insights into genome structure and function.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Massimo Negrini
Department of Morphology, Surgery and Experimental Medicine,
University of Ferrara, Ferrara, Italy

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed, PMC, Inspec, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.2 days after submission; acceptance to publication is undertaken in 4.5 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
