

Special Issue

Key Technologies for Security and Privacy in Web 3.0

Message from the Guest Editors

The open and autonomous nature of Web 3.0 brings about new innovation opportunities; however, it also poses new challenges to the security and privacy of the research community. The key research focus for security and privacy in the context of Web 3.0 is how to protect data security and user privacy in a distributed and decentralized network environment. This includes specific areas such as blockchain technology, decentralized identity authentication, advanced encryption techniques, and secure smart contract development. This Special Issue topics of interest include, but are not limited to, the following:

- blockchain security
- decentralized identity
- secure smart contracts
- decentralized trust management
- privacy preservation in Web 3.0
- DeFi (decentralized finance)
- NFT (non-fungible token)
- cryptography for Web 3.0
- incentive mechanism for Web 3.0
- machine learning in Web 3.0
- secure transaction verification in Web 3.0

About the Journal

Message from the Editorial Board

Editors-in-Chief

Prof. Dr. Liehuang Zhu
School of Cyberspace Science and Technology, Beijing Institute of
Technology, Beijing 100081, China

Dr. Keke Gai
School of Cyberspace Science and Technology, Beijing Institute of
Technology, Beijing 100081, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid
by authors or their institutions.

Rapid Publication:

first decisions in 18 days; acceptance to publication in 4
days (median values for MDPI journals in the second half of
2024).

Recognition of Reviewers

: APC discount vouchers, optional signed peer review, and
reviewer names published annually in the journal.
