

Special Issue

Novel Diagnosis and Treatment for Vascular Dementia

Message from the Guest Editor

Dementia is a worldwide epidemic. Its increasing incidence is not counterbalanced by effective therapeutic approaches, with a poor functional outcome for the affected patient and increased social costs. The importance of understanding the mechanisms of this pathology is motivated by the necessity of novel potential targets able to reduce the burden of dementia in the population. Several studies have underlined that vascular derangement is narrowly involved in dementia onset and progression both in vascular and in neurodegenerative forms. The role of sex, risk factors such as hypertension or diabetes, vascular pathologies, and cardiac issues is currently under investigation. Moreover, novel diagnostic approaches by neuroimaging, doppler ultrasound, and laboratory exams are required to allow early diagnosis and the correct follow-up of this spectrum of diseases. The aim of this Special Issue is to enlighten newer pathological aspects, novel diagnostic markers, and possible evidence-based therapeutic approaches to vascular dementia. Manuscript submissions focusing on pathogenetic, diagnostic, and therapeutic aspects of vascular dementia are welcome and encouraged.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
