Inner Ear Therapy

Message from the Guest Editor

Research in inner ear therapy has expanded during the past two decades focusing on targeted pharmacological actions, gene therapy, and attempts to repair the organ by stem cells. Similar to the central nervous system, the inner ear is protected by a physiological barrier which limits the access of many therapeutic agents via systemic administration. Transtympanic in-situ drug administration has been developed and refined in recent years in order to circumvent this barrier. In this Special Issue, we will gather original works and review papers on therapeutic agents in the inner ear as well as novel administration techniques.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
