Effect of Altered Sensory and Cognitive Processing on Sensorimotor Integration

Message from the Guest Editor

Sensorimotor integration (SMI) refers to the ability to process sensory information and formulate effective motor outputs. Disordered SMI may result from both acute and chronic changes in sensory input. This Special Issue explores the effect of both acute and chronic changes in sensory inputs and how this affects SMI. In addition, it will explore sensorimotor conflicts and how cognitive factors influence the interaction between pain and the motor system, as well as how both acute and chronic effects of altered neck and trunk inputs impact limb sensorimotor control.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
