

# Special Issue

## Prediction and Monitoring of Building Energy Consumption

### Message from the Guest Editors

The goal of this Special Issue is to publish original contributions on technical, experimental, numerical research, as well as experiences in daily building operations aiming at reducing the gap between prediction and reality and at improving building energy management systems. Topics may include, but are not limited to, the following:

- Experimental modelling techniques
- Innovative modelling procedures and tools
- Simplified simulation models
- Building operation models
- Short-term (daily and weekly) and medium-term (monthly annual) energy use forecasting for building operations
- Innovative non-intrusive monitoring techniques for energy efficiency: consumption, contribution of renewables, and hydrothermal comfort
- Building operation monitoring
- Living lab monitoring
- Building component monitoring/test cell monitoring
- Gaps between predictions and real monitoring
- Adjustment and validation of simulation models based on real data on building performance

---

### Guest Editors

Prof. Dr. Sergio Vega-Sánchez

Escuela Técnica Superior de Arquitectura, Universidad Politécnica de Madrid, Madrid, Spain

Prof. Dr. Beatriz Arranz

Building Construction Department, Technical University of Madrid (UPM), 28004 Madrid, Spain

---

### Deadline for manuscript submissions

closed (30 March 2023)

## About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

---

### Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Civil) / CiteScore - Q1 (Architecture)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2024).
