The Tumor Microenvironment: Interplay Between Immune Cells

Message from the Guest Editors

The immune system provides critical defense against tumors. While therapies aimed at immune cells have proven efficacious across multiple cancer types, many patients either fail to respond or relapse. Overcoming the impairment of immune cells within the tumor microenvironment (TME) could improve outcomes for patients receiving immune therapies. For this Special Issue, original research articles and reviews regarding the interplay between immune cells within the TME are welcome. Research areas may include (but not limited to) the following: immune mechanisms of resistance, interplay between cancer and immune cells and novel combination strategies. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
