Novel Metabolic Approaches Targeting Cancer Cells

Message from the Guest Editors

Metabolic reprogramming is one of the main hallmarks of cancer. Numerous studies have shown that the metabolic phenotype of cells within tumors is heterogeneous and distinct from their normal counterparts. Furthermore, altered metabolism has been recognized as one of the major mechanisms of resistance to current therapies. Thus, targeting the metabolic differences between tumor and normal cells holds promise as a novel anticancer strategy. The purpose of this Special Issue is to discuss the latest research of the metabolic reprogramming of cancer cells, particularly focusing on metabolic vulnerabilities that might be future therapeutical targets. This Special Issue welcomes original research articles, as well as reviews. Prof. Dr. Michael Lisanti

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
