

## Special Issue

# Tumor Microenvironment and Breast Cancer Progression

### Message from the Guest Editor

The tumor microenvironment is closely linked to breast cancer progression, and the interaction of tumor cells with its environment plays a key role in angiogenesis, immune-escape, epithelial–mesenchymal transition, drug resistance, tumor growth, tumor-cell dissemination, tumor-cell dormancy, and metastatic spread. In this Special Issue, we focus not only on the biological role of the tumor microenvironment on breast cancer development and progression but also on new therapeutic approaches that specifically target the interaction between tumor-cells and its environment or the microenvironment itself. Moreover, we are also interested in prognostic and predictive markers that involve the tumor-microenvironment.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
