Physical Activity and Cancer Care

Message from the Guest Editor

The number of people living with or beyond cancer is expected to rise as a result of better screening programs and advancements in treatments. In addition to survival, efforts have started to be directed toward improving the quality of life and health of cancer survivors. With this goal in mind, physical activity might have substantial potential to ameliorate short- and long-term effects of cancer treatments such as fatigue, body fat gain, physical fitness loss, prevention of the development of other chronic diseases for which survivors might be at risk such as diabetes and CVD, a reduction in the odds of a recurrence, and increased survival.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
