Special Issue

Molecular Mechanisms of Gastric Cancer Development

Message from the Guest Editor

Gastric cancer, a heterogeneous disease, remains the most common cause of cancer-related mortality worldwide. Gastric cancers are divided into intestinal, diffuse, mixed, and indeterminate subtypes according to the Laurén classification. Numerous studies have demonstrated how the interaction of dietary and lifestyle factors, host genetic factors, epigenetic changes and genetic changes, and *Helicobacter pylori* infection contributes to the development of gastric cancer. Recently, a comprehensive study by The Cancer Genome Atlas (TCGA) consortium revealed four molecular subtypes of gastric cancer, including chromosomal instability (CIN), microsatellite instability-high (MSI), genomically stable (GS), and Epstein–Barr virus (EBV) molecular subtypes. Although the relationship between *Helicobacter pylori* infection and development of gastric cancer has been explored in past decades, uncovering the molecular mechanisms by Helicobacter pylori that contribute to gastric carcinogenesis is still warranted.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok
Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
