

Special Issue

Advanced Functional Materials for Environmental Catalysis

Message from the Guest Editors

Over the past few decades, advanced functional materials, including metal, metallic oxides, conducting polymers, and carbon nanomaterials, have aroused tremendous interest in energy conversion and storage, environmental remediation, and catalytic fields because of their striking properties. Though the use of various functional materials in energy and environmental fields has been reported, there are still many challenges that need to be taken into account to develop advanced functional materials with high sensitivity, efficiency, and selectivity. The key consideration when designing an efficient functional material is sustainability. It is with great pleasure that we invite you to submit your manuscript to the Special Issue “Advanced Functional Materials for Environmental Catalysis” to share research on fundamental and application of environmental catalysis related to the innovative methodologies, characterization, and mechanism studies.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General
Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 12.9 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
