

Special Issue

Catalytic Hydrogen Production, Storage and Application

Message from the Guest Editor

The potential use of hydrogen as a clean and renewable fuel has gained significant attention in recent years. Hydrogen is a promising clean energy carrier that can be produced from fossil fuels such as natural gas or coal. It can also be produced from renewables, including biomass, water splitting using renewable energy from wind, solar, geothermal, or hydroelectric sources. Future research needs to develop low-cost, highly efficient catalytic hydrogen production from renewable sources. For this purpose, an improvement in the catalysts' efficiency for hydrogen production is highly required. Hydrogen is a clean energy source that can replace fossil fuels, whereas its transportation and storage are complicated and expensive, which restrict its practical applications, especially at large scale. To overcome these shortcomings, hydrogen carriers/storage materials, such as ammonia, organic hydrides, metal hydrides, and hydrocarbons have been developed.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General
Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 12.9 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
