

Special Issue

Innovative Strategies for (Photo)Electrocatalytic Water Splitting and CO₂ Reduction

Message from the Guest Editors

This Special Issue focuses on innovative strategies for (photo)electrocatalytic water splitting and CO₂ reduction. In this context, introducing novel morphologies and composite materials for enhancing the efficiency and selectivity of reactions is of crucial importance. The Special Issue welcomes research topics based on single atom catalysis and visible active catalysts. The ultimate goal is to strive for a strategy to improve efficiency and stability of the material for (photo)electrocatalytic water splitting and CO₂ reduction. Original works within the scope of this Special Issue in the form of full papers or communications are all welcome. Mini reviews on an overview of the state of the art with outlooks toward future trends in this field of study will also be considered.

KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General
Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 12.9 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
