

## Special Issue

# Catalytic Applications of CeO<sub>2</sub>-Based Materials

### Message from the Guest Editor

Over the past several years, cerium oxide and CeO<sub>2</sub>-containing materials have come under intense investigation as catalysts and as structural and electronic promoters of heterogeneous catalytic reactions. Apart from well-established uses in three-way catalysts (TWCs), CeO<sub>2</sub> is emerging as a catalyst component for a wide range of catalytic applications: Reforming of hydrocarbons and oxygenates, CO oxidation and preferential CO oxidation in the presence of H<sub>2</sub> (PROX), water-gas shift (WGS), conversion of syngas to alcohols, C-C coupling, aldol condensations, partial oxidation, solar-driven thermochemical CO<sub>2</sub> reduction, CO<sub>2</sub> conversion to fuels and chemicals and clean energy production with solid oxide fuel cells. This Special Issue is intended to cover the most recent progress in catalytic applications of CeO<sub>2</sub>-based materials from synthesis and characterization to the evaluation of activity in order to gain insights towards the development and the utilization of one of the most important industrial and environmental constituent in a wide range of catalytic systems.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Keith Hohn  
Carl R. Ice College of Engineering, Kansas State University, Manhattan,  
KS, USA

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,  
CAPlus / SciFinder, CAB Abstracts, and other databases.

##### Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General  
Environmental Science)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 12.9 days after  
submission; acceptance to publication is undertaken in 2.8  
days (median values for papers published in this journal in  
the first half of 2024).
