

Special Issue

Multifunctional Materials for Photocatalytic and Photoactivated Processes

Message from the Guest Editors

Metal oxides are a very important family of nanomaterials, having unique properties that are attractive for a number of applications. Titanium dioxide nanoparticles, because of their flexibility and versatility, are a well-investigated class of metal oxides for photocatalytic and photoactivated processes. This Special Issue of *Catalysts*, “Multifunctional Materials for Photocatalytic and Photoactivated Processes”, is devoted to research works dealing with light-activated semiconductor oxides showing (at the same time) more functionalities. A particular preference will be given to materials activated by light, as they are expected to play a significant role in photocatalysis, photo-electronics, photoswitches, photo-optical sensors, smart windows, displays, optical storage memories, self-cleaning materials, building materials, and the preservation of cultural heritage.

Guest Editors

Dr. David Maria Tobaldi

CNR NANOTEC, Institute of Nanotechnology, Campus Ecoteckne, Lecce, Italy

Dr. Manfredi Saeli

Department of Architecture (D'ARCH), University of Palermo, Viale delle Scienze bld 8-14, 90128 Palermo, Italy

Deadline for manuscript submissions

closed (15 June 2021)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Keith Hohn
Carl R. Ice College of Engineering, Kansas State University, Manhattan,
KS, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec,
CAPlus / SciFinder, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Physical) / CiteScore - Q1 (General
Environmental Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 12.9 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the first half of 2024).
