

## Special Issue

# Bone Morphogenetic Protein (BMP) Signaling in Health and Diseases

### Message from the Guest Editor

BMP family members are involved in a wide-ranging and continuously expanding number of functions, including dorsal-ventral pattern formation, morphogenesis, organogenesis, cell differentiation, and lineage direction of stem cells. In adult organisms, BMPs also control several cellular processes, including cell proliferation, differentiation, apoptosis/survival, autophagy, chemotaxis, and migration/invasion in many different cell types, and they play critical roles in different organ systems. BMP signaling is extensively regulated at different levels: extracellularly, by a plethora of receptors, co-receptors, and agonist and antagonist extracellular molecules; and intracellularly, where finely tuned Smad and non-Smad signaling pathways modulate downstream cellular responses. Thus, dysregulation of BMP signaling has pathological consequences, and accumulating evidence points at BMPs as the epicenter of many human diseases. Furthermore, BMPs signaling is seen as a clinical target with therapeutic potential.

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities, 6-145 Jackson Hall, 321 Church St SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
