Human Brown Adipose Tissues

Message from the Guest Editor

The presence of brown adipose tissue (BAT) in adult humans was described as early as 1908 in autopsy reports by Edmond Bonnot. More than one hundred years later, the human BATs were rediscovered. Under physiological conditions, the activities of human BATs are augmented by cold stimuli, beta3-adrenergic signals, and atrial natriuretic peptide. Pathological conditions such as cancer cachexia can induce hyperactivation of BATs although the critical mediators for cachexia induction remain undetermined. Despite several reports regarding the candidate molecules, their main producers are not BATs per se in most cases, and therefore, there may be still undiscovered BATokines that play crucial roles in metabolism regulation. Since there is a large hurdle in obtaining high-quality human BAT samples from technical and ethical points of view, human pluripotent stem cells(hPSC)-derived brown adipocytes (BA) have been providing a beneficial tool to study human BATs. To solve the mysteries of human BATs, findings obtained from animal experiments, clinical research, and hPSC-derived BA-based studies should effectively be integrated in tight collaboration among researchers.

About the Journal

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Editors-in-Chief

Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities, 6-145 Jackson Hall, 321 Church St SE,
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,
Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
