

## Special Issue

# Platelet Function beyond Hemostasis

### Message from the Guest Editor

Blood platelets are well-known for their essential role in hemostasis and thrombus formation. In the context of infection, the inflammatory and thrombotic mechanisms are closely related and affect each other. Thrombotic mechanisms and the role of platelets are perceived. Furthermore, platelet granules contain numerous different proteins known to be involved not only in hemostasis and inflammation, but also in angiogenesis, wound healing, and tumor growth. The adhesion of platelets to other cells and matrix proteins via specific receptors followed by activation of the platelets is a central mechanism leading to the release of the granules content. In this way, platelets play a significant role in many different processes beyond hemostasis, including angiogenesis and tumor progression. The aim of this Special Issue is to provide an overview of the current knowledge on platelets affecting inflammation, innate immune response, vascular development, wound healing and vice versa. Furthermore, aspects of tumor growth and progression are considered for a better understanding of platelet function beyond hemostasis.

### Guest Editor

Dr. Peter Bugert

Institute of Transfusion Medicine and Immunology, European Center for Angioscience (ECAS), Medical Faculty Mannheim, Heidelberg University, Friedrich-Ebert-Str. 107, D-68167 Mannheim, Germany

### Deadline for manuscript submissions

closed (30 August 2021)

## About the Journal

### Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

---

### Editors-in-Chief

Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities, 6-145 Jackson Hall, 321 Church St SE,  
Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen,  
Copenhagen, Denmark

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
