

## Special Issue

# Advanced Electrochemical Sensors or Biosensors Based on Nanomaterial

### Message from the Guest Editors

Integration of nanomaterials in the development of electrochemical sensor and biosensor provides enhancing of the electroanalytical performances, i.e., sensitivity, selectivity and the lowest limit of detection. Also, specific characteristics related to fast signal, stability, the life-time and miniaturization are improved. It is well-known that the electrode material plays the key role in sensing performance through a large variety of analytical procedures. Functional nanomaterials can produce a synergic effect among electrocatalytic activity, enhanced electroactive surface area and biocompatibility to accelerate the signal transduction for all or specific targeted analytes. Coupling different electrochemical methods with design of a large variety of functional nanomaterials for the electrode composition, e.g., carbon nanomaterials, magnetic nanomaterials, widens the practical application of electrochemical sensors and biosensor in medical, food and environmental fields. Keywords: electrochemical devices and sensors; materials for chemical sensing; nano- and micro-technologies; bioanalytical chemistry; quantitative analysis; drug and medico-diagnostic testing

---

### Guest Editors

Prof. Dr. Florica Manea

Dr. Aniela Pop

Dr. Sorina Motoc

## About the Journal

### Message from the Editorial Board

*Chemosensors* continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

### Editors-in-Chief

Prof. Dr. Nicole Jaffrezic-Renault

Institute of Analytical Sciences, UMR CNRS 5280, Department LSA, 5  
Rue de La Doua, 69100 Villeurbanne, France

Prof. Dr. Jin-Ming Lin

Department of Chemistry, Beijing Key Laboratory of Microanalytical  
Methods and Instrumentation, Tsinghua University, Beijing 100084,  
China

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus /  
SciFinder, Inspec, Engineering Village and other  
databases.

#### Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore -  
Q2 (Analytical Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 17.1 days after  
submission; acceptance to publication is undertaken in 2.6  
days (median values for papers published in this journal in  
the first half of 2024).
