Advances in the Manufacture of Sensors Based on Molecularly Imprinted Polymers

Message from the Guest Editors

Molecularly imprinted polymers (MIPs) have undoubtedly shown a great deal of versatility as they have been successfully applied to a variety of fields such as medicine and diagnostics, food and environmental monitoring, as well as several niche areas. There is still a crucial demand for robust and reliable sensing devices, in particular for in-field testing. The combination of MIPs and electrochemical detection methods represents a valuable approach to the development of cost-effective, robust, and sensitive detection platforms. Whilst electrochemical detection probably represents the most widespread approach, other detection techniques are emerging. Both review articles and original research papers are welcome, including but not limited to the following areas:

- Novel concepts and emerging applications of MIP-based sensors;
- Multiplexed platforms;
- New imprinting techniques or MIP integration methodologies into sensors;
- Niche applications and hybrid sensors exploiting dual detection principles simultaneously;
- Critical reviews on the current state of the art, perspectives on market adoption.

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Prof. Dr. Nicole Jaffrezic-Renault

Institute of Analytical Sciences, UMR CNRS 5280, Department LSA, 5
Rue de La Doua, 69100 Villeurbanne, France

Prof. Dr. Jin-Ming Lin

Department of Chemistry, Beijing Key Laboratory of Microanalytical
Methods and Instrumentation, Tsinghua University, Beijing 100084,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPus /
SciFinder, Inspec, Engineering Village and other
databases.

Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore -
Q2 (Analytical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.1 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2024).
