

Special Issue

Electrochemical Biosensors and Bioassays Based on Nanomaterials

Message from the Guest Editors

The synthesis, biofunctionalization and application of novel nanomaterials open a plethora of possibilities for both biosensor and bioassay applications.

Nanomaterials provide unique chemical, physical, electronic, and magnetic properties, and make them very attractive for developing novel and outstanding devices for biosensing applications. For example, magnetic nanoparticles, as nanosized support in electrochemical bioassays, offer numerous advantages. Bioassay and biosensor technologies have the potential to speed up the target detection, increase specificity and sensitivity, and may be used for early diagnosis. In addition, different types of bioreceptors and transduction elements may be combined. Among different approaches, electrochemical transduction offers the advantages of high sensitivity and selectivity, low cost, miniaturization, real-time output, simplicity of starting materials, and the possibility to develop user-friendly and ready-to-use biosensors and bioassays. **Keywords:** Nanotechnology Nanomaterials Magnetic beads Nanoparticles Biofunctionalization

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Prof. Dr. Nicole Jaffrezic-Renault

Institute of Analytical Sciences, UMR CNRS 5280, Department LSA, 5
Rue de La Doua, 69100 Villeurbanne, France

Prof. Dr. Jin-Ming Lin

Department of Chemistry, Beijing Key Laboratory of Microanalytical
Methods and Instrumentation, Tsinghua University, Beijing 100084,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus /
SciFinder, Inspec, Engineering Village and other
databases.

Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore -
Q2 (Analytical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.1 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2024).
