

Topical Collection

Sustainable Metal Oxide Materials for Sensing Applications

Message from the Collection Editors

In the last several decades, nanotechnology has advanced at an impressive rate, owing to a high level of development in both materials and processing routes. This impressive progress is contributing significantly to the growth of several areas, such as (opto)electronics, chemical sensors, medicine/biology, energy, and others. Particularly, sensors are some of the key devices in smart surfaces and Internet of things (IoT) applications. To meet these concepts, sensing applications now require flexible, transparent, nanoscale devices and materials. In this context, metal oxides are particularly interesting due to their good optical and electrical properties and their capability for transparency, large area uniformity, and good mechanical flexibility. Concerning the environmental issues the world is facing, special attention should be given to materials and methods which are low-cost and sustainable, while still enabling high integration levels. Thus, this Special Issue welcomes the submission of papers focused on the fabrication of sustainable metal oxide materials, in the form of thin films or nanostructures, and their application for sensors.

About the Journal

Message from the Editorial Board

Chemosensors continues to grow as a forum for all manners of sensing that encompass chemistry. *Chemosensors* is published in open access format – all articles and content are released on the internet immediately following acceptance, thus allowing unlimited access to the content as soon as it is published. We would be happy to have you join our growing list of authors.

Editors-in-Chief

Prof. Dr. Nicole Jaffrezic-Renault

Institute of Analytical Sciences, UMR CNRS 5280, Department LSA, 5
Rue de La Doua, 69100 Villeurbanne, France

Prof. Dr. Jin-Ming Lin

Department of Chemistry, Beijing Key Laboratory of Microanalytical
Methods and Instrumentation, Tsinghua University, Beijing 100084,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus /
SciFinder, Inspec, Engineering Village and other
databases.

Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore -
Q2 (Analytical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 17.1 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2024).
