Addressing Adolescents' Health Care Needs - Missing Opportunities

Message from the Guest Editors

Adolescence is a central developmental stage that constitutes the major transition between childhood and adulthood. As significant physical, psychological, and behavioral changes occur during this period, adolescents require a variety of preventive, diagnostic, and treatment services that can respond to their diverse medical and psycho-social health problems. Triggered by biological, social, and cognitive changes, adolescents tend to be more susceptible to risk-taking behaviors, which are a major source of morbidity and mortality and also contribute to poor health outcomes in adulthood. The need to improve adolescent physical and mental health has become a priority issue worldwide. Providing quality health care for adolescents requires services delivered in a multi-disciplinary setting by health providers who are well trained and sensitive to their developmental needs. We look forward to your contribution. Both reviews and original research articles (qualitative, quantitative, and mixed-methods studies) related to this topic are welcome.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or comprehensive review for consideration and publication in *Children* (ISSN 2227-9067). *Children* is an open access journal—research articles, reviews, and other content are published online immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. The journal focuses on sharing clinical, epidemiological, and translational science relevant to children's health. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
