

Special Issue

Recent Advances on Friction-Involved Dynamics

Message from the Guest Editors

Friction is a ubiquitous and intricate phenomenon. When it is involved in the dynamic environment, innumerable problems arise in a variety of applications, such as the intensification of wear and fatigue, counteractive friction-induced vibration, and noise issues. Studies on the nature of friction, the dynamic analysis of friction-related vibration problems, and the development of novel numerical and control methods for dynamic friction problems all contribute to solving challenges related to friction-induced vibration. The topics of interest for this Special Issue include (but are not restricted to):

- Friction sources at the nano-, micro- and macro-scale;
- Dry friction dampers for turbine blades;
- Mechanisms of friction-induced vibration and control methods;
- Physics-induced neutral network for dynamic friction-related problems;
- Rub-impact mechanism and dynamic response of rotor system with rub-impact coupling fault;
- Any other friction-related dynamics and wear research.

About the Journal

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.
