

Special Issue

Effect of Drought Stress on Nutrient Management in Crop Plant Production—2nd Edition

Message from the Guest Editor

Abiotic stresses are significant constraints on crop production and food security worldwide. The situation has been aggravated due to the drastic and rapid changes in the global climate. Nutrient management in drought conditions is undoubtedly the most crucial factor, having a substantial impact on the growth and productivity of crops. In the wake of climate change, drought and heat stresses have become the most critical limiting factors for crop productivity and food security. Therefore, understanding the physiological and ecological crop plant reactions and responses related to these stresses is important for better crop production management. This Special Issue of *Crops* aims to collect current knowledge on the transformation and digestibility of nutrients contained in the soil and brought in with organic and mineral fertilizers in drought conditions. Understanding the mechanisms influencing the absorption of nutrients and their availability for plants is crucial to ensuring the continuity of agricultural production and food security, which is extremely important in the era of advancing climate change.

About the Journal

Message from the Editor-in-Chief

Crops (ISSN 2673-7655) is an international, peer-reviewed, open access journal. It publishes original articles, critical reviews, and short communications in every aspect of crop science. The journal invites contributions concerning production, improvement and utilization of all plants that are grown as crops including grains, oilseeds, forages, vegetables, fruits, nuts, and those grown for industrial uses. Our aim is to publish timely experimental and theoretical research results in a rapid and readily accessible manner. Every published article is made immediately available worldwide with free and unlimited access to everyone. If you want your work to reach a global audience of crop scientists, we invite you to submit a paper *Crops*, the international journal of crop science.

Editor-in-Chief

Prof. Dr. Yinglong Chen

Australia, Perth, WA 6009, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.1 days after submission; acceptance to publication is undertaken in 5.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
