

Special Issue

Oncological Decision-Making in Theory and Practice

Message from the Guest Editor

Research has shown that a diagnosis of cancer can affect patients (and their caregivers) psychologically as well as physically. Particularly important are the decision-making processes in which patients are constantly engaged, from diagnosis to post-remission, as their choices can change their trajectories of recovery and well-being. This Special Issue aims to highlight recent findings on the topic of decision-making processes in oncology. Specifically, we welcome submissions of research and review articles contributing to the understanding of the overall psychological aspects related to medical decision-making, both from the perspective of patients with cancer and their caregivers, as well as from the clinicians' point of view. Submissions from all fields of psychology and oncology regarding these issues are welcome, with a particular preference for contributions regarding the implementation and the effectiveness of eHealth and mHealth tools to support better decisions, the investigation of bias and heuristics in decision-making, and the understanding of the doctor-patient interaction and its effect on decision-making.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as incoming Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief
