

Special Issue

Compositional and Functional Characteristics of Small Ruminants' Milk and Dairy

Message from the Guest Editors

We are launching a Special Issue entitled “Compositional and Functional Characteristics of Small Ruminants' Milk and Dairy”. The consumption of sheep and goat milk and dairy is an old practice consolidated in different geographical areas of the world. The key elements that determine the quality of these dairy products are breed, feed, regional traditions, water and climate. In recent decades, consumer demand and acceptance of these traditional non-cow dairy products has been growing, opening new economic scenarios for their breeding. We kindly invite you to contribute to this Special Issue with original research or review articles on the composition, technological quality, feeding and farm practices, and control of the whole chain system from farm to table, as well as the potential health benefits of these non-bovine milk and dairy products. Omics approaches will be greatly welcomed.

About the Journal

Message from the Editor-in-Chief

Dairy (ISSN 2624-862X) is an international, peer-reviewed open access advanced forum for studies related to the advances in dairy science. It publishes reviews, regular research papers and short communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers. The full experimental details must be provided so that the results can be reproduced.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, FSTA, and other databases.

Journal Rank:

CiteScore - Q1 (Agricultural and Biological Sciences
(miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 4.9 days (median values for papers published in this journal in the first half of 2024).
