New Insights in Pediatric Dermatopathology

Message from the Guest Editor

Paediatric Dermatology and Dermatopathology are expanding subspecialties that cover a wide range of disorders including genodermatoses, cutaneous and subcutaneous tumours and inflammatory disorders. Even though adults and children share a lot of skin diseases, some disorders are mostly observed in childhood, some of them even being specific to this age group. That is why dermatopathologists are more and more called upon to deal with skin biopsies in neonates, infants or children. The aim of this Special Issue is to cover some important fields in which knowledge has improved greatly in recent times, sometimes thanks to the development of new markers and molecular biology (i.e., melanocytic and histiocytic disorders), and sometimes just because young dermatologists are now less reluctant to perform a biopsy on a child. Moreover, clinicopathological correlations and multidisciplinary meetings have allowed the emergences of new classifications, such as in vascular anomalies or development anomalies. To cover this, we invite you to write articles on important fields of paediatric dermatopathology.

About the Journal

Message from the Editor-in-Chief

I have the great pleasure of announcing that *Dermatopathology* has received an updated Impact Factor of 1.6 for June 2024, maintaining its position as the highest rated Impact Factor journal among all the existing dermatopathology journals (with an increasing impact on clinico-pathological correlation articles for clinical dermatologists).

This immense success is a result of the excellent work of our Editorial Team, who have engaged in the meticulous selection and peer reviewing of high-quality articles covering different aspects of cutaneous pathology. This journal publishes case reports, communications, full articles, research articles and reviews on clinical, molecular, and investigative dermatopathology in several Special Issues per year. The journal's publications are indexed in PubMed. I encourage all the specialists in cutaneous pathology to submit any original research to *Dermatopathology*.

Editor-in-Chief

Author Benefits

High visibility

: indexed within ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.3 days after submission; acceptance to publication is undertaken in 4.2 days (median values for papers published in this journal in the first half of 2024).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
