New Insights into Diagnosis of Orthodontics

Message from the Guest Editors

The discussion around orthodontic diagnostics has been going on for over 100 years, yet there is no universally accepted diagnosis which can recognize all abnormalities in the masticatory system due to its multifactorial characteristics. The classification of malocclusion includes the assessment of facial features, occlusal conditions, and functional assessment of the masticatory system in sagittal, vertical, and transverse dimensions. Important in diagnosis is also diagnostics based on cephalometric analysis, which is a pivotal part of orthodontic diagnosis as it defines the skeletal and dental relations in a face. Dysfunctions and parafunctions of the masticatory apparatus in breathing, chewing, swallowing, and pronunciation, as well as assessment of periodontal tissues, also require careful assessment. Comprehensive orthodontic diagnosis is a basis for orthodontic treatment planning, execution, and retention. Recent advances in diagnostic techniques in dentistry such as digital radiology and the use of dental and facial scanners are very helpful for performing three-dimensional assessment of the deformities in the maxillofacial complex.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer

Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2024).
