Special Issue

Advances in Breast Cancer Imaging and Treatment

Message from the Guest Editors

Breast cancer is the most commonly diagnosed cancer in women, and the first cause of cancer-related death in the female population. In spite of the high incidence, the breast cancer mortality rate has been declining for several years due to more effective treatments and early cancer detection, owing to the progressive spread of modern breast imaging techniques such as DBT, elastosonography, CEM and MRI functional techniques. Moreover, radiomics/radiogenomics image analysis and artificial intelligence are guiding new approaches to highlight breast cancer characteristics and to stratify patients according to risk of disease, risk of recurrence, overall survival and other prognostic and predictive factors. Over the last few decades, the proportion of early-stage breast cancers at diagnosis has increased, reaching about 80%, and breast-conserving surgery is the standard approach for early-stage breast cancer. This Special Issue of *Diagnostics* is focused on the latest research on the diagnosis and prognosis of breast cancer through novel imaging techniques, as well as on personalized therapies with special attention to minimally invasive imaging-guided procedures.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer
Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:
JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.3 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2024).
