Classification Systems, Neoadjuvant Setting and Prognostic Factors in Cervical Cancer

Message from the Guest Editors

Cervical cancer is the fourth most common cancer in women worldwide, and the second most common in low- and middle-income countries. Clinical stage is the most significant prognostic factor. Neoadjuvant radiochemotherapy followed by surgery or perioperative treatment is well established as current standard treatment for LACC. The effects of preoperative treatment can be evaluated by histology, and determination of tumor regression is frequently integrated in the pathology reports of resection specimens. Currently, there is no agreement and common standard for processing resection specimens after neoadjuvant treatment and for reporting of tumor regression for cervix cancers. It is still a matter of debate which system may provide better results in terms of interobserver agreement or prognostic value. We retain that future studies are necessary for the implementation of the best classification system, able to correctly define the tumoral bed. Finally, an adequate tumor regression scoring system with significant correlation with outcome could be considered an important piece of the puzzle in tailored therapies for patients with LACC.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Andreas Kjaer

Department of Clinical Physiology, Nuclear Medicine & PET National University Hospital, Rigshospitalet, University of Copenhagen, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2024).
