

Special Issue

Arthropods Associated with Forest Soil and Wood

Message from the Guest Editor

Forests are undoubtedly the ecosystems richest in arthropods. Forests are "home" to many taxonomic groups, including myriads of insects and numerous arachnids, myriapods, isopods, proturans, and two-pronged bristletails. These include various ecological groups, among which particularly rich in species are decomposers that are essential to the turnover of organic matter and forest growth. Forests are also suitable habitats for many predators, parasites, and pests, some of the latter with great economic importance. Discovering and understanding the arthropod diversity are essential to maintaining healthy and well-managed forests. The high degree of arthropod diversity in forests is related, among other things, to diverse forest microhabitats, and the diversity of forest types on a local and global scale. This diversity is, however, threatened by various environmental factors. This Special Issue invites both original research and review papers that contribute to our knowledge of forest arthropod fauna. Presenting different approaches and methods and outlining the most important problems are essential to indicating directions for future research.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q2 (Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.4 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2024).
