Genetic Diversity of Domesticated and Natural Fish Populations: Patterns and Processes

Message from the Guest Editors

The goal of this Special Issue is to reveal spatial and temporal patterns of genetic diversity in fish populations, but also to identify the processes that generate these patterns. We are open to a wide range of contributions from the fields of landscape genetics, phylogeography, phylogenetics or macrogenetics, covering landscape- to continental-scale studies, as well as contemporary to geological time scales. Studies focusing on patterns of both neutral and functional genetic diversity through the use of genomic, transcriptomic and/or epigenetic markers are particularly welcome since “-omic” tools now permit routinely and jointly inspecting both aspects of fish genetic diversity. Similarly, studies investigating processes underlying spatiotemporal patterns of fish genetic diversity through advanced statistics or simulations would be relevant contributions to this Special Issue. Beyond these objectives, our aim is to attract studies with strong applied perspectives since genetic diversity is at the heart of many empirical applications such as wildlife conservation, habitat restoration or management of aquaculture and fisheries.

About the Journal

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Editor-in-Chief

Prof. Dr. Michael Wink

Institute of Pharmacy and Molecular Biotechnology, Heidelberg
University, Im Neuenheimer Feld 329, D-69120 Heidelberg, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biodiversity Conservation) / CiteScore - Q2 (Agricultural and Biological Sciences (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.4 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2024).
