Swarm Intelligence in Multi-UAVs

Message from the Guest Editor

Research on swarm intelligence in multi-UAVs performing cooperative complex tasks dates back to the late 1990s. Over the last decade, this research area has blossomed, with many significant efforts devoted to the research and development of swarm intelligence in multi-UAV systems. To date, efforts in the study of cooperative controller design of swarm intelligence in multi-UAVs for various tasks have been continuously increasing. However, there are still many issues yet to be explored, discovered, and understood. This Special Issue is devoted to collecting the latest developments and achievements in the study of swarm intelligence in multi-UAVs and encourages readers to participate in this promising and challenging research area.

About the Journal

Message from the Editor-in-Chief

Drones is the only international open-access journal about the science, policy and technology of drones and its applications. Nowadays, the proliferation of drones is a reality for local policy makers, regulatory bodies, mapping authorities, startups and consolidated companies. There are many uses and benefits of drones: from the emergence of new sensors and the evolution of new platforms; to the development of specific software and the emergence of new applications. *Drones* publishes reviews, regular research papers, communications and short notes, without restriction on the length of papers. *Drones* seeks to provide a central forum for scholars engaged in drones' research and applications.

There is a need for high quality papers in this area and the *Drones* Editorial Board are widely recognized international leaders. *Drones* journal guarantees a serious peer review and a rapid publication across the whole discipline of drones.

Editor-in-Chief
